## **DETAILED ACTION**

### ***Information Disclosure Statement***

1. The information disclosure statement filed 9/29/2006 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each cited foreign patent document; each non-patent literature publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. It has been placed in the application file, but the information referred to therein has not been considered.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 12, and 15-16 are rejected under 35 U.S.C. 102(b) as being anticipated by Deeken et al (6,114,404).

4. Deeken et al set forth radiation curable ink compositions comprising a pigment, radiation crosslinkable monomers and oligomers and a rheology modifier. In addition, other additive such as plasticizers can be found in column 10, line 20 and column 11, line 41, can be added to the composition in amounts from 0.5 to about 10%. Per column 17, Deeken et al discloses a method of intaglio printing and curing by irradiation, thus claims 12 and 15-16 are anticipated.

5. Claims 1, 12, and 14-16 are rejected under 35 U.S.C. 102(b) as being anticipated by Amon et al (5,658,964).

6. Amon et al teaches reactive printing inks that are printable by intaglio printing methods. Said inks comprise a binder matrix comprising at least one polymerizable compound, fillers, pigments, and photoinitiators, among other additives. The other additives include a plasticizer—see column 6, lines 49-50. Per examples the plasticizer is a micronized polyethylene wax. The examples appear to anticipate applicant's method an intaglio printing. Additionally, the examples teach that said ink is paper wipeable and curable by radiation, such as UV.

***Claim Rejections - 35 USC § 103***

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

8. Claims 2-6, 13 and 17-20 rejected under 35 U.S.C. 103(a) as being unpatentable over Amon et al.

Amon et al is described in the above rejection. Amon et al does not expressly teach said plasticizer is food grade, nor is the molecular weight and boiling points disclosed. However, since The Patent and Trademark Office is not equipped to conduct experimentation in order to determine whether Applicant's composition differs and, if so, to what extent, from the discussed reference. Therefore, with the showing of the reference, the burden of establishing non-obviousness by objective evidence is shifted to the Applicants. Thus unless otherwise shown it is deemed these limitations (claims 2-6 and 17-20) are read/envisioned in the reference.

Regarding claim 13, this limitation is a design choice that one of ordinary skill in the art would have found obvious to depending of the equipment/machinery/processes available to them at the time.

***Allowable Subject Matter***

9. Claims 7-11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

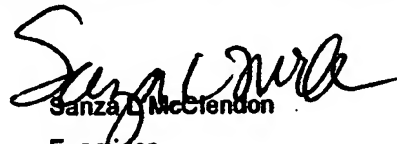

10. The following is a statement of reasons for the indication of allowable subject matter: these limitation where not found in the prior art of energy curable intaglio printing inks such as found in claim 1.
